

Good Stewards Pledge

I, Peter Kogler with CAPITOL CLEANING pledge to follow SoftWash Systems Good Stewards Standards which are a pledge to our environment. SoftWash Systems® is not a new "GREEN" company. We have always had a strong commitment to being more than green. Our company core values place stewardship and service above profits. We believe that profits will come as we focus on doing business in a way that honors our values. This is our "world is round" mindset and "what we reap we sow" is in our moral fiber. Our pledge to passing on a clean, healthy environment is what we have deemed as our Good Stewards™ program. As Good Stewards™, the in-network companies of SoftWash Systems® believe and practice protocols and standards that are for more than just compliance. We wholeheartedly understand we are stewards of the resources we have been entrusted with. You as a customer of the in-network companies of SoftWash Systems® entrust us with your property and we respect that. That respect also transfers to the land, water, and air surrounding your building in addition to your property.

Biodegradable

All SoftWash Systems® cleaners are designed to be biodegradable. Biodegradable means they breakdown into carbon and water within 20 days of their introduction into the environment. Our desire is that the only thing we leave behind is a clean, sanitized surface.

Low VOC

VOC's [volatile organic compounds] are particles in the air containing hazardous compounds that threaten public health. SoftWash Systems® cleaning process and chemicals conform to the California Air Quality Management District standard and do not release harmful VOC's.

Non-Hazardous

All SoftWash Systems® cleaners are non-hazardous when mixed according to label instructions. Our drivers require no special licensing, and our products require no special handling or storage precautions.

Water Based

Water is one of the purest and precious resources on Earth. That is why SoftWash Systems® cleaners are water based. Our cleaners contain no harmful solvents or phosphates which can threaten the ecology of our environment.

Fossil Fuel Free

SoftWash Systems® strives to make sure that we follow the theology of using as little fossil fuel-based energy as possible. We leverage the latest technology in 12-volt, DC powered equipment utilizing both solar and kinetic charging systems when soft washing with SoftWash Systems® equipment. You will never see us pull a cord or turn a key to start a fossil fuel powered cleaning system.
